# AMA'S LULLABY - DEMO v.2

=============================
## USER MANUAL
=============================

You are about to run the first demo of Ama's Lullaby! Here are a few tips to help you enjoy your game...

<u>When a terminal is open:</u>

- **TAB:** completes words or strings without the need to type them in full, automatically.
- **Navigation:** in menus and interfaces, use arrow keys while pressing:
  - **SHIFT** to navigate in the network (with +/- to zoom in/out)
  - **CTRL** to scroll the console text
  - **ALT** to scroll the notifications
- **CTRL + ALT:** fullscreen / windowed mode (only when Ama's laptop is open).

<u>During the game:</u>

- Press **ESCAPE** to open a menu for quitting the game, quitting to title menu or for accessing settings.
- In a hurry? Press **left mouse button** or **SPACE** to skip a dialogue line.

<u>In the title menu, you can access **SETTINGS**:</u>

- Don't forget to choose the graphic **QUALITY** among the 4 quality levels.
- The choice of the **RESOLUTION** has a high impact on the performances. For small configurations, use a large aspect ratio that adds black bars on the top and bottom of your screen. You'll get better performances and a good cinematic immersion.
- In this menu you can also change the current **LANGUAGE** (English or French).

To **SAVE** your progress, use the dedicated terminals placed in the level.

Have a good game!
